

A screen that offers a fourfold service. Following in the footsteps of Frame, FramePro features a structural aluminium frame – divided into several parts for easier transport – and particularly robust and hard wearing angles, which add solidity to the assembly. This model distinguishes itself by enabling four different types of configuration: depending on the chosen version, the projection surface can be front or rear mounted, by means of the traditional elastic bands or with snap buttons.

An additional option is the black flocked frame: the velour finish completely absorbs any light and enhances the perception of contrast in the projected images.

Unprecedented versatility, for the most demanding spectator and for the most atypical situations.

#### FramePro Front Elastic Bands

Version with front-mounted projection surface, applied with elastics

The best response to aesthetic demands and to the expectations of minimalist architecture: the projection surface conceals the structural parts of the screen, harmonising discreetly with the surrounding ambience.

The wall mount (all sizes) includes spacers: this solution has been designed especially for easy installation, and to separate the screen from the wall by a couple of centimetres where necessary (e.g. in case of backlighting). Alternatively, floor assembly is possible by means of specific professional stands. Sizes are customisable. The profile can be divided into several parts.

▲ Easy projection surface installation thanks to elastic bands and rods

### FramePro Front Buttons

Version with front-mounted projection surface, applied with snap buttons

Particularly suitable for service, this proposal meets the expectations of those who prefer to apply the projection surface by means of snap buttons. A black edge is applied all around the border (where the buttons are), hiding any signs of wear resulting from repeated use, and typical of rental contexts on the profile (which is divided in several parts).

The screen can be installed by means of professional stands (floor assembly); on aluminium trusses; wall-mounted (all sizes) with a mount system integrated into the profile (the wall brackets are inserted into the rear part of the frame, ensuring complete adherence).

### FramePro Rear Elastic Bands

Version with rear-mounted projection surface, applied with elastics.

This screen (all sizes) is installed flush with the wall, owing to the mounting system integrated into its profile, which conceals the assembly structure (the wall-mounted bracket inserted into the rear part of the frame). Ideal for fixed installations, and particularly for home theatre applications, it blends in harmoniously with the surrounding environment. This version is available with black varnished or flocked profile. Floor assembly can be achieved by means of professional stands. Sizes are customisable. The profile can be divided into several parts.

## FramePro Rear Buttons

Version with rear-mounted projection surface, applied with snap buttons

Dedicated for those who prefer to apply the projection surface with snap buttons. Wall flush installation is possible with all sizes, owing to the integrated mount system with wall-mount brackets inserted into the rear of the frame.

In addition, infinite applications are also possible in the rental sector, thanks to the floor assembly (achieved by means of professional stands), or the aluminium truss option. Sizes are customisable. The profile is available in flocked or black varnished versions, and can be divided into several parts.
